

Java III Test II Instructions

Scott R. Young

April 13, 2026

You are limited to using techniques and tools taught in this course (and its prerequisites) through lectures, examples, and evaluations.

Prompt driven Generative AIs, such as Co-pilot and Claude, are strictly prohibited for this test.

You are only to modify code that is marked with TODO comments.

With a built .war file deployed on a TomEE 10 server, the test should print out what steps it can complete and any exceptions it encounters when you generate user events on the UI.

1 Instructions

1. Download and unzip the test2.zip file for this test.
2. Open the folder containing db.sql in VS Code.
3. Open HeidiSQL and open your MariaDB connection.
4. Open a query in HeidiSQL.
5. Copy the included db.sql file's contents into the query.
6. Execute the query.
7. Open the following file in VS Code:
test2/src/main/webapp/WEB-INF/web.xml.
8. Follow the directions there to allow your application and service to connect to your DB.
9. Implement the TODO comments in:
test2/src/main/webapp/index.xhtml
test2/src/main/java/test2/app/ShoppingCart.java
test2/src/main/java/test2/app/User.java
test2/src/main/java/test2/service/CartRootResource.java
test2/src/main/java/test2/service/ItemRootResource.java

2 Additional Information

This test is open book; open notes.

You may use anything on the D2L shell, the Java SE docs, the Jakarta EE docs, the official Jakarta EE tutorials (<https://jakarta.ee/learn/docs/jakartaee-tutorial/current/index.html>), or any notes you've written yourself ahead of time.
